

CSC 593/ OCG 404 Term Project Final Presentations:

The term project presentations are an opportunity to showcase the independent work you have completed.

Describe for us the motivation behind your project, the goals you set for yourself (this should come from the term project proposal), how you achieved those goals or how those goals had to be changed, and (most importantly) showcase the software/hardware that you have produced.

Grading will prioritize

1. Clear articulation of motivation and goals from proposal (10%),
2. Clarity and polish of presentation (10%).
3. Description of the software/hardware that were produced (20%).
4. Live action demonstration of software/hardware (30%). For the live-action demonstration: Be daring – try to pull off an elaborate demonstration that really showcases what you have developed. If you can make it interactive or participatory – even better.
5. Your contribution to knowledge in the public domain (submission to YouTube, Web blog tutorial, Github, Zenodo, etc.) (30%). This doesn't have to be completed at the time of presentation, but should be documented during the upload to Brightspace.

Presentations should be 10 min duration + 2-3 min in between for Q/A and transition to next presenter.

Upload your final project presentation in .pdf, .ppt, or .key for full credit by 23:55 on December 15. Make sure to include your link to the public domain resource. No additional write up will be required.

Participation: Come prepared to participate. Ask questions of your fellow students, explore the potential uses of what they have developed, offer suggestions for how they might build up or improve what they have created.
